Normal Hearing Volunteers Wanted for Research

Compensation provided - $20/hour

The purpose of this research is to develop a valid and reliable diagnosis that will detect - in normal hearing subjects - if noise exposure has begun to change the way the auditory nerve responds to sound. Study sessions include filling out a questionnaire, behavioral and electrophysiological hearing assessments and performing tasks such as repeating words in noise to help us learn about hearing and perception.

You may be eligible if:
• You’re healthy.
• You are between 18 and 75 years of age.
• You’re proficient in English.
• You have normal hearing.

You are not be eligible if:
• You’re pregnant.
• You have skin allergies or skin sensitivities.
